

## CASE STUDY

## AIR BOXES

### CORROSION RESISTANT – LONGER LASTING AIR BOXES

A high salinity mine site (20x above standard levels) chose Mammoth Air Boxes with galvanised steel and PU coating to increase their service life from **4,000** to **14,000** hours

Mammoth Air boxes are proven to last 10,000 hours longer than standard

#### Key Features

- Mammoth airboxes are made from galvanized steel (over against standard mild steel)
- Mammoth airboxes are highly resistant to sun, wind and precipitation
- High gloss finish improves self cleaning – dirt and dust washes off during rain or water blasting
- Prevents corrosion from moisture and dust ingress
- Can be internally and externally PU coated for further corrosion resistance
- Widely supplied to mine sites globally and OEM dealers
